DETAILED ACTION

Page 2

Priority

1. Receipt is acknowledged of papers submitted under 35 U.S.C. 119(a)-(d), which papers have been placed of record in the file.

Specification

2. The Abstract of the Disclosure is objected to because the abstract should be in a single paragraph. Appropriate correction is required. See M.P.E.P. § 608.01(b).

Claim Objections

3. Claims 1 and 5-6 are objected to because of the following informalities:

Re claim 1, line 1: Delete "type".

Re claim 5, line 1: Delete "type".

Re claim 6, line 1: Delete "type".

Appropriate correction is required.

Claim Rejections - 35 USC § 102

4. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless -

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

5. Claims 1-3, 5, 7-9 and 11 are rejected under 35 U.S.C. 102(b) as being anticipated by Kobayashi (US 5,378,887).

Re claims 1-3, 5, 7-9 and 11: Kobayashi discloses a non-contact communication apparatus/card 30 control system and method comprising: a communication component 40 which communicates information in a non-contact state; a time designation component 12 which designates a communication permission time; and a communication control component 14 which determines, upon receiving a communication request, whether or not the communication permission time designated by the time designation component 12 has been reached, permits communication by the communication component 14 when determining that the permission time has been reached (col. 6, lines 45-48), and prohibits communication by said communication component when determining that the permission time has not been reached (fig. 2; col. 5, line 35 through col. 6, line 54); wherein the card further comprises a designation component 22 which designates permission/prohibition of communication, and the communication control component 14 further prohibits communication by the communication component 40 if prohibition of communication is designated by the designation component 22 (e.g., the Schmitt trigger circuit 22 has an output E connected to an input of the control circuit 14; the control circuit outputs a control signal controlling the main circuit 16 according to the output signal E of the Schmitt trigger circuit 22) (col. 5, lines 25+ and col. 6, lines 24+); a recording component (e.g., memory 32) which records a log of communication performed by the communication component 40 (figs. 5-9; col. 7, line 41 through col. 9, line 32).

6. Claims 13-14 are rejected under 35 U.S.C. 102(b) as being anticipated by Gaultier (US 6,631,848).

Art Unit: 2876

Re claims 13-14: Gaultier discloses a program for controlling a non-contact communication apparatus which has a communication component 21 which communicates information in a non-contact state, the program causing a computer to execute: a time designation step of designating a communication permission time (e.g., "dead time" or "silent time" T₀) (col. 5, lines 26-31); a communication control step of determining, upon receiving a communication request, whether or not the communication permission time designated in the time designation step has been reached, permitting communication by the communication component when determining that the permission time has been reached, and prohibiting communication by the communication component when determining that the permission time has not been reached (figs. 4a & 4b; col. 5, lines 20-57); a logic circuit, which serves as a designation component which designates permission/prohibition of communication; a computer program causing a computer to execute a communication control step of prohibiting communication by the communication component when prohibition of communication is designated by the designation component (col. 5, lines 46-57).

Claim Rejections - 35 USC § 103

- 7. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:
 - (a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negatived by the manner in which the invention was made.

Application/Control Number: 10/718,604

Art Unit: 2876

8. Claims 4, 6, 10, 12 and 15 are rejected under 35 U.S.C. 103(a) as being unpatentable over Kobayashi in view of Parrault (US 6,724,103). The teachings of Kobayashi have been discussed above.

Re claims 4, 6, 10, 12 and 15: Kobayashi have been discussed above but fail to teach or fairly suggest a display component/step for displaying information recorded in the recording step.

Parrault teaches a non-contact card 10 having a display 30 (fig. 2) for displaying recorded information (col. 4, line 66 through col. 5, line 5).

It would have been obvious to an artisan of ordinary skill in the art at the time the invention was made to incorporate the teachings of Parrault into the system as taught by Kobayashi in order to provide the user/operator with the ability to verify transaction data via the display, preventing any undesired information being transacted. Furthermore, such modification would provide the user the ability to correct and/or stop a transaction readily upon receiving any incorrect information, and therefore an obvious expedient.

Conclusion

9. The prior art made of record and not relied upon is considered pertinent to applicant's disclosure.

The patents to Wallerstein (US 5,955,961); Zuta (US 5,241,161); Sato (JP 2001/283,161); Takahashi et al (JP 2000/172,888); Morishita et al (JP 08/213,942); Aoyanagi et al (JP 11/007,556) are cited as of interest and illustrate to a similar structure of a non-contact communication card and non-contact communication apparatus control method.

Any inquiry concerning this communication or earlier communications from the

Page 6

examiner should be directed to Uyen-Chau N. Le whose telephone number is 571-272-2397.

The examiner can normally be reached on Mon, Wed. and Fri. 5:30AM-6:00PM.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's

supervisor, MICHAEL G LEE can be reached on 571-272-2398. The fax phone number for the

organization where this application or proceeding is assigned is 703-872-9306.

Information regarding the status of an application may be obtained from the Patent

Application Information Retrieval (PAIR) system. Status information for published applications

may be obtained from either Private PAIR or Public PAIR. Status information for unpublished

applications is available through Private PAIR only. For more information about the PAIR

system, see http://pair-direct.uspto.gov. Should you have questions on access to the Private PAIR

system, contact the Electronic Business Center (EBC) at 866-217-9197 (toll-free).
